

# DUAL COOL MIDI TOWER FAN

MTFDC-84RC

VERSATILE    UNIQUE    QUIET    ENERGY EFFICIENT    DUAL POSITION

NSA<sup>UK</sup>'s Dual Cool Midi Tower Fan is compact, unique with clever features including its impressive dual position versatility ~ use in either the upright or horizontal position for a customised cooling experience in any space.

Together with its dual positioning and handy remote control, the Dual Cool hosts an impressive array of features including LED display which dims after 30 secs ~ making it ideal for night-time use, 8 speeds, oscillation, breeze and sleep modes, and an 8 hour timer helping to create the perfect environment.

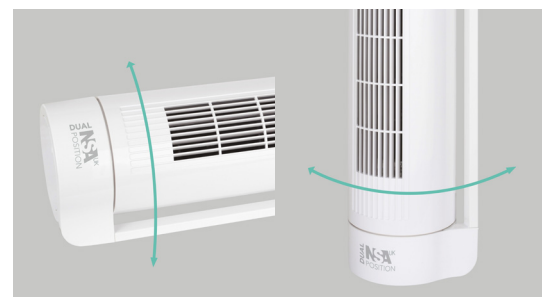

These advanced features are run by a quiet and energy efficient DC motor which saves around 70% on running costs compared to a similar fan with a traditional AC motor.

The unique horizontal positioning is ideal for keeping pets cool in the summer months and the drum is removable allowing for easy cleaning and extra hygiene.

Pre-assembled and ready to use, simply 'plug and go' straight out of the box to enjoy quiet, efficient cooling wherever and whenever you need it.
